

A New
SciFinder®
Add-on

PatentPak™

Preserve Your Most Valuable Resource – Time

Digging through patent literature can be tedious. Searching for the vital chemistry disclosed in patents keeps you from the work that matters most – interpreting how the information impacts your research. That's why CAS developed PatentPak™, a robust new patent workflow solution that enhances the SciFinder experience you already rely on to locate relevant research in your field.

“I analyzed this entire patent and located the important chemistry so you don't have to.”

PatentPak™

Looking for direct and immediate access to full patents?

Instantly connect to searchable, full-text patents from major patent offices spanning the globe.

Want to radically reduce the time spent locating the important chemistry in a patent?

CAS scientists provide page numbers for key substances in the source patent.

Found a patent written in a language you can't read?

Superior patent family coverage provides access to alternative-language versions of the patent.

Discovered a new research path during your analysis?

Launch a new SciFinder search directly within a patent to quickly explore new research avenues.*
